

# Creating a PPPoE Dialer On Linux

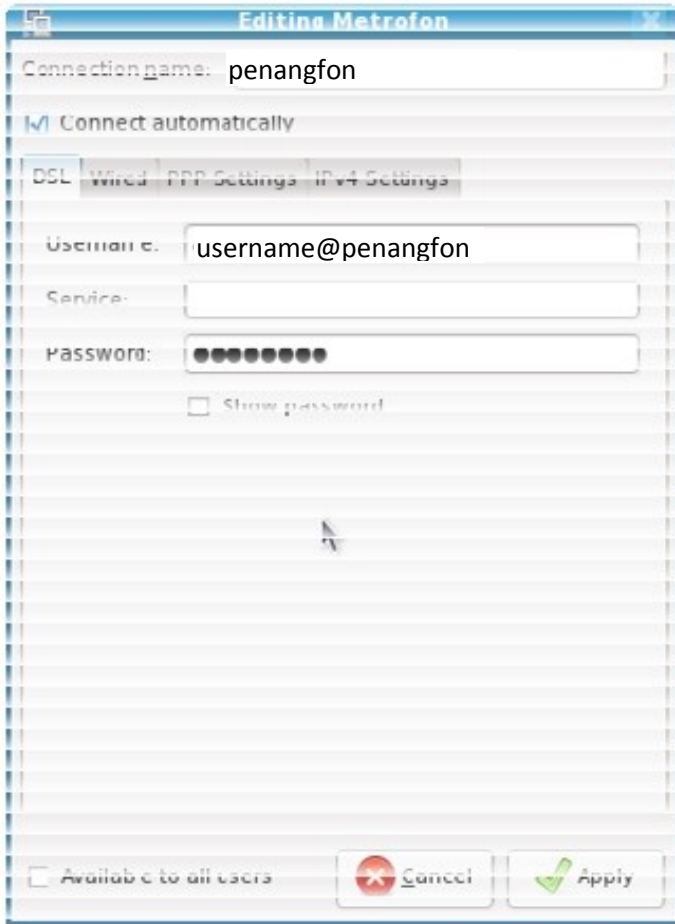

1. Go to “System” ∪ “Preferences” ∪ “Network Connections”

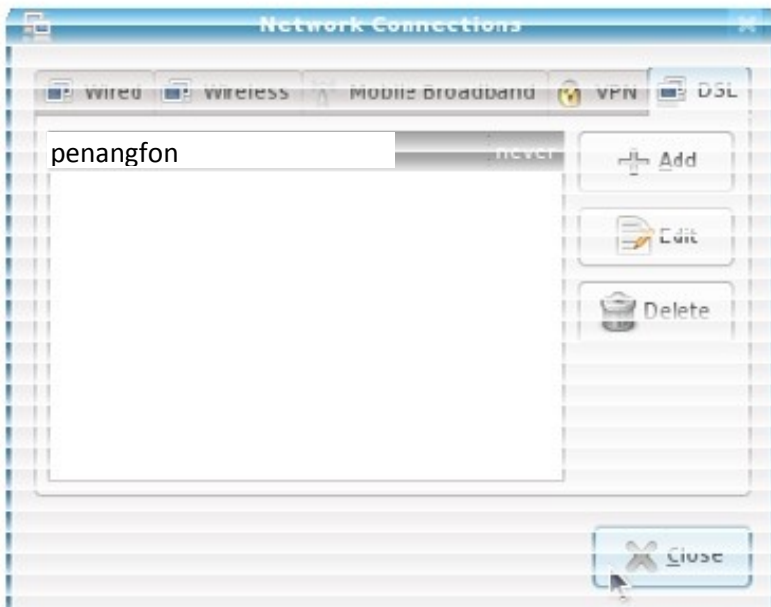

2. Go to “DSL” tab and Click “Add”

- On “DSL” tab, Change the “DSL Connection 1” to “PENANGFON”, then key in the **Username and Password**. (i.e **username@penangfon**, default password is **penangfon**) You can also tick the “Connect automatically” if you need internet to be dialled automatically everytime you start your computer. Finally, click “Apply”.

- Close the “Network Connections” window.

5. To establish PPPoE connection, click the **network** logo beside the time, select “PENANGFON”
